Assignment 9.3: Combine Flexbox and Grid Responsively

Goal: a landing page that uses CSS Grid for layout and Flexbox for alignment, collapsing to one column on mobile.

Rule of thumb

Use **Grid** for two-dimensional layout (page sections, hero columns, card grids). Use **Flexbox** for one-dimensional alignment (navbar, buttons, content inside a card).

1. HTML structure

```
<div class="page">
  <header class="site-header"> logo + <nav> </header>
  <main class="main">
    <section class="hero"> text + image </section>
    <section class="features"> 3-6 <article class="card"> </section>
  </main>
  <footer class="site-footer"> </footer>
</div>
```

2. Grid for the main layout

```
.page { display: grid; grid-template-rows: auto 1fr auto;
        min-height: 100vh; max-width: 1200px; margin: 0 auto; }
.hero { display: grid; grid-template-columns: 1fr; gap: 2rem;
        align-items: center; }              /* mobile: 1 column */
.cards { display: grid; grid-template-columns: 1fr; gap: 1.5rem; }
```

3. Flexbox for navbar, hero buttons and cards

```
.site-header { display: flex; flex-direction: column; align-items: center; }
.nav ul { display: flex; flex-wrap: wrap; justify-content: center; gap: 1rem; }
.hero-actions { display: flex; flex-wrap: wrap; gap: .75rem; }
.card { display: flex; flex-direction: column; gap: .5rem; }
.card p { flex-grow: 1; }   /* keeps links aligned at the card bottom */
```

4. Breakpoints (mobile first)

```
@media (min-width: 768px) {            /* tablet */
  .site-header { flex-direction: row; justify-content: space-between; }
  .cards { grid-template-columns: repeat(2, 1fr); }
}
@media (min-width: 1024px) {           /* desktop */
  .hero  { grid-template-columns: 1fr 1fr; gap: 4rem; }
  .cards { grid-template-columns: repeat(3, 1fr); }
}
```

5. Check spacing and alignment

- Use a consistent gap value instead of margins between grid items.
- Make sure the hero stacks to one column below 1024px and cards to one column below 768px.
- Confirm no horizontal scrollbar at 375px; images use max-width: 100% and height: auto.
- Check that card buttons or links line up at the bottom on desktop.

6. Screenshots

- Open Chrome DevTools (F12), then Device Mode (Ctrl+Shift+M).
- Capture mobile (about 375px), tablet (768px) and desktop (1280px or wider) using Capture full size screenshot.

Submission checklist

- index.html and style.css (plus images folder)
- Screenshot: mobile
- Screenshot: desktop
